Sales Forecasting

Distribution DRP Planning

Manufacturing MRP Planning

Integrated Supply Chain Management for your accounting system. Anytime Supply Chain helps you identify what to buy or what to make based on sales order or forecasted demands, safety stock levels, on-hand inventory, and pending inventory and manufacturing transactions. Gain insight into your supply chain to avoid stock-outs, improve on-time delivery, and maximize your production resources.

Supply Chain Management

“e2b consultants are very helpful and they are exactly what we were looking for in a technology partner – especially given their deep manufacturing knowledge and success working with larger, complex implementations like ours. They understand the software, they take the time to understand our business, and everything is working wonderfully. It was a very good experience from start to finish.”

*Apryll LaHaye, Controller
American Electric Technologies*

ERP Integration

Anytime Supply Chain integrates with leading accounting systems including Intacct financials, Intuit QuickBooks, and Sage 500 ERP providing a true, cloud-based system to manage your simple or complex supply chain for distributors or manufacturers. Items, stock status, sales orders, and purchase order information from the accounting system are combined with Anytime Supply Chain sales forecasts to drive distribution requirements planning (DRP).

Anytime Supply Chain Distribution

Sales Forecasting

Manage sales forecasts by grouping products into different forecast product groups. Forecast daily, weekly, quarterly, or yearly and smooth demand to different period sizes for planning. Maintain forecasts in Anytime Supply Chain or import them from Excel spreadsheets.

MRP/DRP Requirements Planning

Use inventory, sales order, and purchase order information from your accounting system with sales forecasts and work orders from Anytime Supply Chain to empower your planners with the information they need to manage your supply chain. Distribution Requirements Planning (DRP) helps distributors to determine what to buy, when to buy, and how much to buy based on current supply and demand. Material Requirements Planning (MRP) extends DRP for manufacturers who need to know what to make, when to make it, and how much to make.

eCommerce

Anytime Commerce extends your order entry capabilities for online sales orders. It is designed specifically for the complex needs of business to business (B2B) ecommerce where existing customers log-in to access customer specific pricing; to review previous purchase transactions and invoices; or for remote sales reps, brokers, dealers, and other agents to process orders online for their respective accounts. Business to consumer (B2C) orders are also supported.

Anytime Supply Chain Manufacturing (Future)

Bill of Materials

Design bills of materials using your inventory items and define routings for the parts you manufacture. BOM information is used to drive Material Requirements Planning (MRP) with exception messages alerting your planners what to make, how much to make, and when to make it based on raw material lead times and manufacturing cycle times.

Production Entry

Record finished good manufacturing results alleviating inventory of purchased raw materials with finished goods quantities created in your accounting system to fulfill orders or for required production demands. Cost accounting transactions are provided for a clear picture of your operations in your general ledger.
